

# Infection Control Breach: What's Next?

Melissa Scott, RN Outbreak Epidemiologist

June 13, 2024  
Immunization Summit - Day 1

## Who should be notified?

- Time frame?
  - Four months
- Which patients?
  - Any patient who was receiving an infusion

**A list of patients who received infusions during the four-month period should be requested.**

- This list should be gathered by the facility and provided to the health department for multiple purposes:
  - Patient notification
  - Cross match with the Hepatitis B, Hepatitis C, and HIV registries

## Scenario continues:

**The patient list is received, and the cross match is completed. The findings are as follows:**

- Two patients from the list are in WVEDSS as cases of Hepatitis B.
  - One patient had a positive test prior to being seen in the clinic.
  - The second patient had a positive test after being seen in the clinic and has no other identified risk factors.
